PRODUCT INFORMATION

FX365C Low-Voltage CTCSS Encoder/

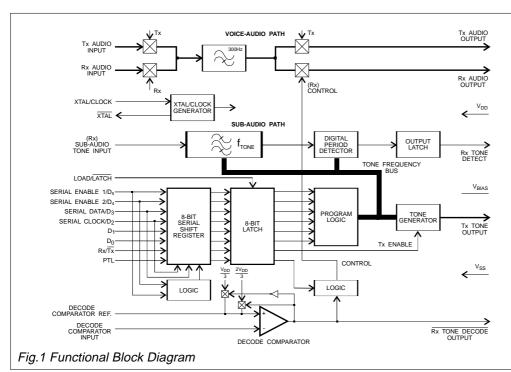

Publication D/365C/3 October 1995

Features

- Low-Voltage (3-Volt) Supply
- 39 Programmable Sub-Audio
 Tones + Notone
- Meets MPT1306 and EIA 220 B
- High Voiceband/CTCSS Isolation
- Separate Sub-Audio and Rx/Tx Audio Paths and Filtering

Applications

- Mobile Radio Systems
- Community Base Stations
- "Sports Radio" (Japan)
- Sub-Audio Signalling and Selective Calling
- Status and Alarm Systems
- Amateur Radio

Island Labs

FX365C

Brief Description

The FX365C is a 3-volt, half-duplex predictive Continuous Tone Controlled Squelch System (CTCSS) encoder/decoder microcircuit. The FX365C has integral voice-band filtering for prefiltering of Tx audio and the rejection of the CTCSS tone in receive.

Under µProcessor control, the FX365C will encode and decode any one of 39 sub-audio frequencies (+Notone) in the range 67.0Hz to 250.3Hz. Tone frequencies and all functional commands can be loaded to the device in either pin-selectable 8-bit parallel or serial format.

A separate, Rx/Tx voice-audio path is available with a highpass (sub-audio reject) filter automatically placed in the relevant Rx or Tx voice line. The Rx sub-audio (CTCSS) path contains a (selected tone frequency) bandpass filter and period detector providing a logic level output (Rx Tone Detect) to indicate a successful decode operation.

Rx "Press to Listen" (PTL) and Tx "Squelch-Tail Elimination" functions are available in both command loading modes. The squelch-tail elimination function will provide (Tx tone) phase-reversal to minimise the annoying audio outputs that occur at the receiver on completion of a transmission.

Tone frequencies and filter accuracies are maintained by an on-chip 1.0MHz clock oscillator employing an external crystal or clock pulse input.

The FX365C, which exhibits high audio and subaudio performance with low falsing, is available in 24pin DIL and small outline SMD packages.

Pin Number

Function

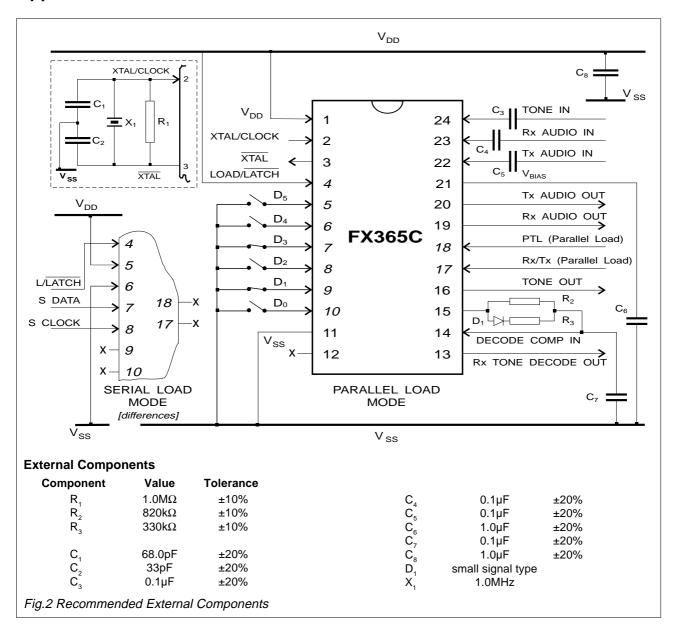

Pin Num	per Function
FX365C	DW, J, LG and LS package styles
1	V _{DD} : Positive supply rail. A single stable supply is required; levels and voltages within the FX365C are dependent upon this supply. This pin should be decoupled to V _{SS} by a capacitor located close to the pin.
2	Xtal/Clock: Input to the on-chip inverter; used with a 1.0MHz Xtal or external clock source.
3	Xtal: Output of the on-chip clock oscillator inverter.
4	Load/Latch: Controls 8 on-chip latches and is used to latch Rx/Tx, PTL, D ₀ - D ₅ . This pin is internally pulled to V _{DD} . A logic '1' applied to this input places the 8 latches into a 'transparent' mode. A logic '0' applied to this input places the 8 latches into the 'latched' mode. In parallel mode data is loaded and latched by a logic '1' to '0' transition (see Figure 4a). In serial mode data is loaded and latched by a '0' to '1' to '0' strobe pulse on this pin (see Figure 4b).
5	D_{s} /Serial Enable 1: Data input D_{s} (Parallel Mode); Serial Enable 1 (Serial Mode). A logic 'l' applied to this input, together with a logic '0' applied to D_{s} /Serial Enable 2, will put the device into 'Serial Mode' (see Figure 4b). This pin is internally pulled to V_{DD} .
6	D₄/Serial Enable 2: Data input D ₄ (Parallel Mode); Serial Enable 2 (Serial Mode). A logic '0' applied to this input, together with a logic '1' applied to D ₅ /Serial Enable 1, will place the device into 'Serial Mode' (see Figure 4b). This pin internally pulled to V _{DD} .
7	D_3 /Serial Data: Data input D_3 (Parallel Mode); Serial Data Input (Serial Mode). In Serial Mode this pin becomes the serial data input for D_5 - D_0 , Rx/Tx, PTL (see Figure 4b). D_5 is clocked-in first and PTL last. This pin internally pulled to V_{DD} .
8	D₂/Serial Clock: Data input D ₂ (Parallel Mode); Serial Clock Input (Serial Mode). In Serial Mode this pin becomes the Serial Clock input. Data is clocked on the positive-going edge (see Figure 4b). This pin is internally pulled to V_{DD} .
9	D ₁ : Data input D ₁ (Parallel Mode); Not Used (Serial Mode). This pin is internally pulled to V _{DD} .
10	D ₀ : Data input D ₀ (Parallel Mode); Not Used (Serial Mode). This pin is internally pulled to V _{DD} .
11	V _{ss} : Negative supply (GND).
12	Decode Comparator Ref. (I/P): Internally biased to $V_{DD}/3$ or $2V_{DD}/3$ via 1.0MΩ resistors depending on the logical state of the Tone Decode Output pin, this input provides the decode comparator reference voltage; switching of bias voltages provides hysteresis to reduce 'chatter' under marginal conditions. Tone Decode Output = logic '1' will place this input to $2V_{DD}/3$ bias, a logic '0' will bias this input to $V_{DD}/3$.
1	I I

Pin Number

Function

riii Nuiiik	Dei Function
FX365C	DW and J package styles.
13	Rx Tone Decoder (O/P): The gated output of the on-chip Decode Comparator. This output is used to gate the Rx Audio path. A logic '0' output on this pin indicates a successful decode and indicates that the 'Decode Comparator Input' pin is more positive than the 'Decode Comparator Ref' input (see Table 1).
14	Decode Comparator Input: The inverting input of the Decode Comparator. This pin is to be connected to the Rx Tone Detect pin via external integrating components as shown in Figure 2.
15	Rx Tone Detect (O/P): In the Rx mode this output will go to a logic '1' during a successful decode (Table 1). This pin is to be connected to the Decode Comparator Input via the external integrating circuitry as shown in Figure 2.
16	Tx Tone Output: A low-impedance emitter-follower source, under the control of the Rx/Tx pin, of the CTCSS sinewave. This output, when not transmitting a sub-audio tone, may be set to a V _{DD} /(2-0.7)V bias or open-circuit as described in Table 1.
17	Rx/Tx : This input (Parallel Mode) selects Rx or Tx modes (see Figure 2). Logic '1' = Rx; logic '0' = Tx. In Serial Mode this (Rx or Tx) function is serially loaded via pin 7 (Serial Data) and this pin not used. This pin is internally pulled to V_{DD} via a $1M\Omega$ resistor (Rx operaion).
18	PTL: A dual-function input. In the parallel load mode, Rx operation: A logic '1' provides a "Press To Listen" function by overriding the tone-squelch and enabling the audio path. In the parallel load mode, Tx operation: A logic '1' provides a "Squelch Tail Elimination" function by reversing the phase of the transmitting sub-audio tone; the phase reversal function should be applied by a suitable timing circuit. In the serial load mode (Rx and Tx) these functions are loaded via the serial data word at pin 7.
19	Rx Audio Output: The high-pass filtered 'Received Audio' output. This pin outputs audio when Rx Tone Decode = '0', or PTL = '1' or 'Notone' is programmed (Table 2). In Tx Mode this pin is biased to $V_{DD}/2$.
20	Tx Audio Output: The high-pass filtered 'Transmit Audio' output. In Tx mode this pin outputs audio present at the Tx Audio Input by opening the Tx audio path. In Rx mode this pin is biased to V _{DD} /2.
21	V_{BIAS} : The output of the on-chip analogue bias circuitry. Held internally at $V_{\text{DD}}/2$, this pin should be externally decoupled to V_{SS} .
22	Tx Audio Input: The Tx Audio Input pin. Tx voice-band audio may be prefiitered, using the Voice Audio Path, thus helping to avoid talk-off due to the intermodulation of speech frequencies with the transmitted CTCSS tone. The Tx Audio Path may also be used to pre-filter speech when employing 'scramblers' which could introduce noise into the low frequency band. This pin is internally biased to $V_{DD}/2$.
23	Rx Audio Input: The input to the Voice Audio high-pass filter in the Rx Mode. This pin is internally biased to $V_{\rm DD}/2$.
24	Tone Input: The input to the CTCSS tone detector and is internally biased to V _{DD} /2.

Application Information

Input Pin Condition			Output Pil	Output Pin Condition Result and/or Function							
D ₀ to D ₅	Rx/Tx	PTL	Decode Comp. Input	Rx Tone Detect	Rx Tone Decode	Tone Tx Enabled	Tx Tone Phase Reversed	Tx Audio Path Enabled	Tone Decoder Enabled	Rx Audio Path Enabled	
Tone	0	0	Х	0	1	Yes	No	YES	No	No (BIAS)	1 _A
TONE	0	1	X	0	1	YES	Yes	YES	No	No (BIAS)	1в
NOTONE	0	X	X	0	1	No (BIAS)	X	YES	No	No (BIAS)	2
TONE	1	0	0	0	1	No(o/c)	X	No	YES	YES	3 A
TONE	1	1	0	0	1	No (o/c)	X	No	YES	YES	3в
TONE	1	X	1	1	0	No (o/c)	X	No	YES	YES	4
Notone	1	Х	X	×	0	No (o/c)	X	No	YES	YES	5

Notes

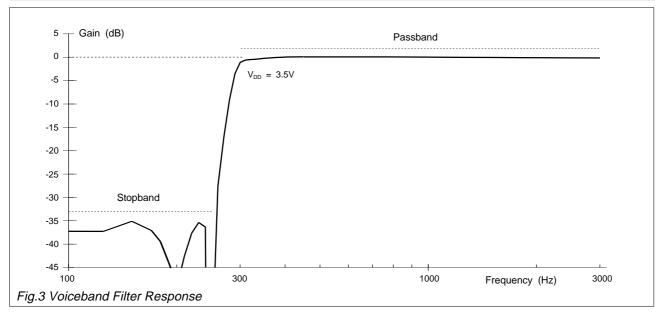

- 1_A Normal tone transmit condition.
- 1B Tone Tx with phase reversed.
- Notine programmed in Tx mode; tone transmit output set to $V_{DD}/2$ -(0.7v). Tx audio path enabled.
- 3_A Normal decode standby.
- 3B Normal decode standby with PTL used to enable audio.
- 4 Normal 'decode of correct CTCSS tone' condition; PTL has no effect.
- 5 NOTONE programmed in Rx mode; tone transmit output (o/c). Rx audio path enabled.

Table 1 Combinations of Input/Output Conditions

Specification

Absolute Maximum Ratings

Exceeding the maximum rating can result in device damage. Operation of the device outside the operating limits is not implied.

 $\begin{array}{lll} & & -0.3 \text{ to } 7.0 \text{V} \\ & \text{Input voltage at any pin (ref V}_{\text{SS}} = 0 \text{V}) & -0.3 \text{ to } (\text{V}_{\text{DD}} + 0.3 \text{V}) \\ & \text{Sink/source current (supply pins)} & +/- 30 \text{mA} \\ & & & \text{(other pins)} & +/- 20 \text{mA} \\ & \text{Total device dissipation @ T}_{\text{AMB}} \ 25^{\circ}\text{C} & 800 \text{mW Max.} \\ & \text{Derating} & 10 \text{mW/}^{\circ}\text{C} \\ & \text{Operating temperature range: } \textbf{FX365C J} & -40^{\circ}\text{C to } +85^{\circ}\text{C} \text{ (cell)} \\ \end{array}$

Operating temperature range: FX365CJ -40°C to +85°C (cerdip) FX365CDW -40°C to +85°C (plastic)

Storage temperature range: FX365C J -55°C to +125°C (cerdip)
FX365C DW -40°C to +85°C (plastic)

Operating Limits

All device characteristics are measured under the following conditions unless otherwise specified: $V_{DD} = 3.3 \text{V}$. $T_{AMB} = 25 ^{\circ}\text{C}$. Xtal/Clock $f_{0} = 1.0 \text{MHz}$. Signal 0dB ref: = 180mVrms. Composite Signal = 1.0kHz Audio Tone at 0dB, Noise at –12.0dB (gaussian white noise, band-limited to 6.0kHz), Programmed CTCSS Tone at -20dB.

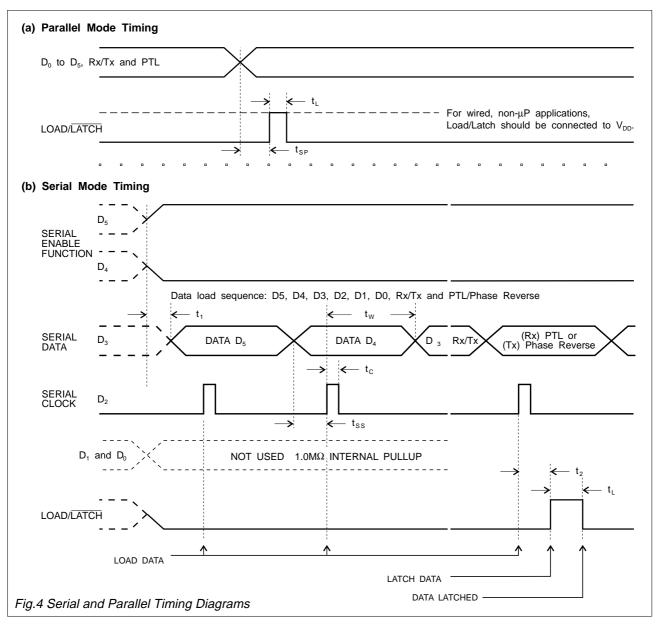

Characteristics	See Note	Min.	Тур.	Max.	Unit
Static Characteristics					
Supply Voltage (V _{pp})		3.0	3.3	5.5	V
Supply Current					
(Tx)		-	1.5	-	mA
(Rx)		-	1.5	-	mA
Sub-Audio Tone Input Impedance		-	1.0	-	$M\Omega$
Tx Tone Output Impedance		-	4.0	-	kΩ
Voice-Audio Input Impedance		-	1.0	-	$M\Omega$
Voice-Audio Output Impedance		-	1.0	-	$k\Omega$
Digital Input Impedance	1	-	1.0	-	$M\Omega$
Input Logic '1'	1	70.0	-	-	$%V_{_{\mathrm{DD}}}$
Input Logic '0'	1	-	-	30.0	%V _{DD}
Output Logic '1', source = 0.1mA	2	80.0	-	-	$%V_{DD}^{DD}$
Output Logic '0', sink = 0.1 mA	2	-	-	20.0	$%V_{DD}^{DD}$
Dynamic Characteristics					טט
Tone Decoder					
Decode Input Signal Level	3	-20.0	-	-	dB
Decode Response Time	3, 6	-	-	250	ms
De-Response Time	3, 6	-	-	250	ms
Decode Selectivity	3	±0.5	-	±3.0	%f _o
Tone Encoder					O
Tx Tone Output Level		-	627	_	mVrms
Tx Tone Frequency Accuracy (for error)		-0.3	-	+0.3	%f _o
Risetime to 90% (nominal output)					U
f _o > 100Hz	4	_	55.0	_	ms
f _o < 100Hz	4	-	70.0	-	ms
Tone Output Load Current		-	-	5.0	mA
Total Harmonic Distortion		-	2.0	5.0	%
Output Level Variation Between Tones		-	0.1	-	dB
Spurious Emissions		-	-	-48.0	dB
Voice-Audio Filter and Path					
Passband Frequencies		300		3000	Hz
Passband Gain					
at 1.0kHz		_	0	_	dB
w.r.t. 1.0kHz		-2.0	-	0.5	dB

Specification

Characteristics	See Note	Min.	Тур.	Max.	Unit
Serial/Parallel Inputs					
Parallel Set-Up Time (t _{sp})		400	-	-	ns
Load/Latch Pulse Width (t,)		400	-	-	ns
Serial Clock Pulse Width (t)		400	-	-	ns
Serial Set-Up Time (t _{ss})		400	-	-	ns
Serial Enable Time (t,)		400	-	-	ns
Serial Load/Latch Set-Up Time (t ₂)		400	-	-	ns
Serial Clock Frequency		-	1.0	-	MHz

Notes

- 1. Refers to Rx/Tx, PTL, Decode Comparator Input, D₀, D₁, D₂, D₃, D₄, D₅ inputs.
- 2. All logic outputs.
- 3. Composite Signal test condition.
- Any programme tone and RL = 600Ω . CL = 15pF. Includes response to a phase-reversal instruction.
- 5. 1kHz reference = 0dB.
- $\rm f_{\odot}$ > 100Hz, (for 100Hz > $\rm f_{\odot}$ >67Hz: t = (100/f $_{\odot}$ Hz) x 250ms). Measured in a 30kHz bandwidth. 6.
- 7.
- For an input level of 180mVrms at 1.0kHz, in a 30kHz measurement bandwidth. 8.

Package Outlines

The FX365C is available in the package styles outlined below. Mechanical package diagrams and specifications are detailed in Section 10 of this document.

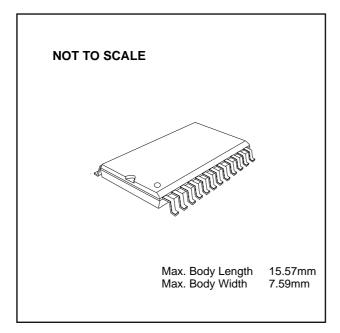

Pin 1 identification marking is shown on the relevant diagram and pins on all package styles number anti-clockwise when viewed from the top.

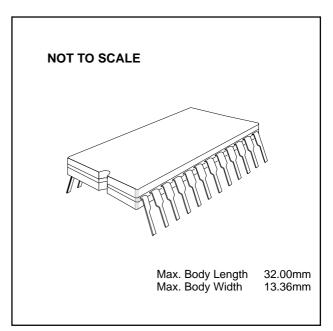

Handling Precautions

The FX365C is a CMOS LSI circuit which includes input protection. However precautions should be taken to prevent static discharges which may cause damage.

FX365C DW 24-pin plastic S.O.I.C (D2)

FX365C J 24-pin cerdip DIL (J4)

Ordering Information

FX365C DW 24-pin plastic S.O.I.C. (D2)

FX365C J 24-pin cerdip DIL (J4)

CML Product Data

In the process of creating a more global image, the three standard product semiconductor companies of CML Microsystems Plc (Consumer Microcircuits Limited (UK), MX-COM, Inc (USA) and CML Microcircuits (Singapore) Pte Ltd) have undergone name changes and, whilst maintaining their separate new names (CML Microcircuits (UK) Ltd, CML Microcircuits (USA) Inc and CML Microcircuits (Singapore) Pte Ltd), now operate under the single title CML Microcircuits.

These companies are all 100% owned operating companies of the CML Microsystems Plc Group and these changes are purely changes of name and do not change any underlying legal entities and hence will have no effect on any agreements or contacts currently in force.

CML Microcircuits Product Prefix Codes

Until the latter part of 1996, the differentiator between products manufactured and sold from MXCOM, Inc. and Consumer Microcircuits Limited were denoted by the prefixes MX and FX respectively. These products use the same silicon etc. and today still carry the same prefixes. In the latter part of 1996, both companies adopted the common prefix: CMX.

This notification is relevant product information to which it is attached.

Company contact information is as below:
